Technical Skills

Languages & Databases: Python, TypeScript, JavaScript, Kotlin, Elixir, PostgreSQL, MongoDB, Redis, Snowflake
Frameworks: React, Node.js, Fastify, Express, Phoenix
Cloud & Infrastructure: GCP, Docker, Kubernetes, Jenkins
Data & Analytics Tools: Mode, Datadog, Git

Experience

Faire **October 2025 – June 2026**
Software Engineer *Toronto, ON*

- Developed an AI-powered content generation assistant using **Python** and **Kotlin** that drafts brand-authentic customer outreach using merchant stories and campaign history, reducing campaign creation time by **45%**.
- Led development of discount-enabled CRM automations across Promotions, Cart, Payments and Email systems, powering **5K+** automated open-cart recovery emails
- Developed a contextual retailer insights panel that surfaces customer, order and open cart information inline, reducing redirects to customer details page by **80%**
- Standardized dynamic merge-tag infrastructure for personalized customer communications across email and messenger systems, enabling real-time content substitution across **500K+** emails and messages
- Implemented automated abuse-detection systems for CRM communications, screening **100K+** customer interactions weekly for suspicious links, attachments, and messaging activity

Replicant **August 2022 – February 2025**
Full Stack Software Engineer *Toronto, ON*

- Led end-to-end planning and execution for a multi-layer PII redaction system, coordinating deliverables across Delivery, Platform, and ML teams and unlocking deals exceeding **\$500K**
- Developed a backend rules engine and a matching frontend interface that work together to let non-technical users create AI agents visually, reducing development time by **75% (8→2 weeks)**
- Developed modular, LLM-driven components for intelligent data extraction, increasing the average resolution rate by **30%** for collecting name, address, email, time, date, and phone numbers in voice interactions
- Worked on GenAI Answers using LLMs, Elasticsearch, and custom knowledge bases for dynamic FAQ resolution, reducing time to market by **66%** compared to a full AI Agent solution
- Designed and implemented a bypass system to circumvent LLM processing for simple user responses, reducing latency on average by **3 seconds** per turn and reducing operational costs

Kinaxis **September 2021 – December 2021**
DevOps Intern *Ottawa, ON*

- Developed a **C#** tool to automate Jira & Confluence item creation for large projects, saving 3 hours per project.
- Implemented Jenkins build automation with VM state storage, reducing average time to resolve build failures by **1 hour**

National Bank of Canada **January 2021 – April 2021**
Software and Data Engineering Intern *Montreal, QC*

- Developed and deployed an orchestrator platform (Elixir/Phoenix) that routed chatbot widget queries to RASA and managed RASA instance load
- Built performance and analytics dashboards with Datadog integration and telemetry event tracking, providing stakeholders with real-time platform performance metrics and reducing troubleshooting time from hours to minutes

Pani Energy **January 2020 – April 2020**
Software Developer Intern *Victoria, BC*

- Developed and deployed Productized Dashboards (React-Redux, Python, PostgreSQL) that enabled non-power users to create custom dashboards using UI tools, increasing build-time efficiency by **75%**
- Conducted GUI & API testing using Enzyme and Postman for new and existing code, focusing on debugging and isolating areas for improvement

Education

University Of Waterloo **Sep. 2017 – May 2022**
Honours Bachelor of Computer Science – Distinction

Wilfrid Laurier University **Sep. 2017 – May 2022**
Honours Bachelor of Business Administration – Distinction
