Akhil Talati

(226) 988-3090 | akhiltalati101@gmail.com | linkedin.com/in/akhiltalati101 | Toronto, Ontario

Technical Skills

Languages & Databases: Python, TypeScript, JavaScript, Kotlin, C#, Elixir, PostgreSQL, MongoDB, Redis, Snowflake
Frameworks: React, Node.js, Fastify, Express, Phoenix
Cloud & Infrastructure: Azure, AWS, GCP, Docker, Kubernetes, Jenkins
AI Tooling: Agentic Coding, RAG, LLM-based data extraction, LLM Evaluations

Experience

Faire **Toronto, ON**
Software Engineer *October 2025 – June 2026*

- Built an AI content generation assistant **(Python, Kotlin)** that drafts brand-authentic campaigns from merchant stories and history, lifting automation activation by **3 % points** in A/B test, with AI drafts used in **1/3** of activated automations
- Led development of discount-enabled open-cart CRM automations across Promotions, Cart, Payments and Email systems, with emails attributed to **22K+ orders** and **$6.75M+ GMV** in the first four months after launch
- Standardized dynamic merge-tag infrastructure for personalized customer communications across email and messenger systems, enabling real-time content substitution across **500K+** emails and messages monthly
- Implemented automated abuse detection and security for CRM communications, screening **100K+** customer interactions weekly for suspicious links, attachments, and messaging activity
- Developed a contextual retailer insights panel that surfaces customer, order and open cart information inline, reducing redirects to customer details page by **80%**

Replicant **Toronto, ON**
Full Stack Software Engineer *August 2022 – February 2025*

- Developed GenAI Answers, a **RAG** system using LLMs and leveraging **Elasticsearch** as a **vector database** retrieval over custom knowledge bases for dynamic FAQ resolution, reducing time to market by **66%** compared to a full AI Agent solution
- Led end-to-end planning and execution for a multi-layer PII redaction system, coordinating deliverables across Delivery, Platform, and ML teams and unlocking deals exceeding **$500K**
- Developed a backend rules engine (**TypeScript**, **Node.js**) and a matching frontend interface (**React**) that work together to let non-technical users create AI agents visually, reducing development time by **75% (8→2 weeks)**
- Developed modular, LLM-driven components for intelligent data extraction, increasing the average resolution rate by **30%** for collecting name, address, email, time, date, and phone numbers in voice interactions
- Designed and implemented a bypass system to circumvent LLM processing for simple user responses, reducing latency on average by **3 seconds** per turn and improving cost efficiency at scale

Kinaxis **Ottawa, ON**
DevOps Intern *September 2021 – December 2021*

- Built PowerShell-based **Jenkins CI/CD** automation that captured and preserved the VM's state on build failure for debugging, reducing average time to resolve build failures by **1 hour**
- Developed a **C#** desktop tool integrating with Jira and Confluence APIs to auto-generate pre-filled templates and file them into the correct project structure, eliminating manual setup and saving 3 hours per agile project

National Bank of Canada **Montreal, QC**
Software and Data Engineering Intern *January 2021 – April 2021*

- Developed and deployed an orchestrator platform (**Elixir/Phoenix**) that routed chatbot widget queries to RASA and managed RASA instance load
- Built observability dashboards with Datadog integration and telemetry event tracking, providing stakeholders with real-time platform performance metrics and reducing troubleshooting time from hours to minutes

Pani Energy **Victoria, BC**
Software Developer Intern *January 2020 – April 2020*

- Developed and deployed Productized Dashboards (**React, Python, PostgreSQL**) that enabled non-power users to create custom dashboards using UI tools, increasing build-time efficiency by **75%**
- Conducted GUI & API testing using Enzyme and Postman for new and existing code, focusing on debugging and isolating areas for improvement

Education

University Of Waterloo **September 2017 – May 2022**
Honours Bachelor of Computer Science - Distinction - Double Degree

Wilfrid Laurier University **September 2017 – May 2022**
Honours Bachelor of Business Administration - Distinction - Double Degree
